TITLE : LIQUID-CRYSTAL DISPLAY UNIT

ABSTRACT : PURPOSE: To make it possible to select the color of liquid-crystal display body, by automatically or manually replacing two kinds of polarization plate or more different in color.

CONSTITUTION: As polarization plates 11 and 12 used for a liquid-crystal display body, a polarization plate obtained by connecting two kinds of polarization plate or more different in color in one or that whose color is made different partially on its surface is used. Further, the polarization plate is provided with a guide hole, a guide groove or a guide protrusion and slid automatically via the guide part, so that the color of the polarization plate can be changed. For example, in case of an wristwatch, the display color can be changed according to the forenoon and afternoon, or date and days of a week. In case of an electronic desk calculator, on the other hand, the display color can also be changed for appealing to the eye when positive numbers, negative number and a memory have different meanings on a number unit.
